

**Amendments to the Claims:**

1. (Currently Amended) A composition to be used in a process for electroplating surfaces with tin, said composition comprising the following components (g/l):

- |   |   |        |
|---|---|--------|
| - | Tin in a form of tin sulfamate  | 50-90  |
| - | Sulfamic acid, free   | 40-100 |
| - | Sulfates, in a form of $\text{SO}_4^{2-}$                                 | 0-15   |
| - | Nitrogen-bearing block copolymer<br>of propylene oxide and ethylene oxide | 1-6    |

said copolymer having a molecular weight of 3950 to 6450, said copolymer further having a ~~and~~ number of ethylene oxide links-to-number of propylene oxide links ratio of 1.4-1.2:1.0[[,]] at initial buildup of required number of links from propylene oxide followed by oxyethylation, the composition having a pH of 0.6 to 1.1.

2. (Canceled)

3. (Previously Presented) Method for electroplating a surface in form of a steel strip or plate, the method comprising:

electrolytically coating the surface in the presence of the composition according to claim 1.

4. (Previously Presented) Method according to claim 3 performed in continuous electroplating lines with the steel strip conveying at a speed of 2 to 11 m/s.

5. (Original) Method according to claim 3 performed at temperatures of 20 to 70°C.

6. (Original) Method according to claim 3 performed at current densities of 5 to 70 A/dm<sup>2</sup>.

7. (Original) Method according to claim 3 in which the strip or plate is subjected to a pretreatment of degreasing and pickling.

8. (Previously Presented) Method according to claim 3 in which the strip or plate is subjected to a post-treatment of reflowing, passivation and oiling of a tin coating.

9. (Canceled)
